P R O F I L E

I've mastered backend and frontend development, I am also good at design, photography and a little at SMM. You can check my works in related sections. I began as a designer and photographer, worked in AIESEC as a promoter on several forums and hosted the online event page. Soon I realized, that this is not enough to make a meaningful contribution to life, so I began to code.

E D U .

MASTER OF DESIGN

Self-taught

2015–2021

MERN DEVELOPER

Self-taught

2020–2021

UI/UX Builder

Self-taught

2021

E X P .

MASTER OF DESIGN

2019–2020 | AIESEC Designer

At 16, I joined an international team of volunteers. Was the administrator of the online page, did the design of posts, as well as their content

UI / UX

2020 | AIESEC Administrator

After a while I became the leading designer of the conference, the conversion of which was 90%. I also prepared several events and communicated with the audience

CODE NINJA

2020–2021 | Borodutch Labs

After a while, I decided that design by itself does not change the world that much, but code combined with good design is a gold mine. I met Nikita Kolmogorov, who allowed me to study, undergo an internship, and then get a job with him.

bwl.gg

2021–2024 | Big Whale Labs

I worked at Big Whale Labs (aka [bwl.gg](#)). This startup was the starting point of my adventure.

I worked as a Full stack engineer, among other things writing and working with blockchain contracts on Solidity.

We used a regular MERN stack, adding necessary tools (like tailwind, vite, react-query, jotai and others).

We made [sealcred.xyz](#), [echo.sealcred.xyz](#), [dosu.io](#) using React in conjunction with TypeScript.

We also made [ketlxyz](#) and [app.ketlxyz](#) using cross-platform React-Native-Web. I learned teamwork and upped my skills a lot

S K I L L S

- React
- TypeScript
- Tailwind
- React-Native-Web
- Solidity
- MongoDB
- Node.js
- Bash
- HTML/CSS
- Firebase
- MongoDB
- JAM Stack
